Map Explanation

This is a collaborative project of the communities within the YUS Local Level Government (LLG), Morobe Province, and the Cartography Unit of the Department of Lands

and Surveying, University of Technology, Lae. Technical assistance was provided by the Tree Kangaroo Conservation Program (TKCP) and the Center for the Support of Native

Cultures (CSC) in the United States. Local communities gathered information on their traditional knowledge of the region, including the salient physical features, land use patterns, and significant

cultural and historical sites. Local villagers gathered this information in their communities and then worked closely with the cartographic team and a geographer from the Department of Surveying and Land Studies (DSL) to produce this map as a decision-making tool in the development and

consolidation of a community-run Conservation Area in the region. This is the first project of its kind in Papua New Guinea.
