

COEXISTING WITH CARNIVORESSHARING FINDINGS AND RECOMMENDATIONS

SHARING FINDING: Student presentation checklist

	n 1. Investigation Question
	We shared our investigation question. Our investigation question explores how natural or human-made landscape features affect carnivore behavior.
	We described how our community observations from our community map and our community interview helped us to develop our investigation question.
	We explicitly stated our manipulated variable and our responding variable.
Sectio	n 2. Research Methods
	We explained why we selected our research method.
	We explained why we didn't select other research methods we considered. We described our research methods in enough detail that they could be replicated by someone in our community.
Sectio	n 3: Data Analysis and Presentation
	We summarized and shared our data in a logical way.
	We clearly stated at least two confounding variables. We stated how our confounding variables may have impacted our investigation results.
	We presented our data in a visualization such as a graph or chart.
	Our visualization is neat, easy to read, and includes the appropriate titles, labels, and captions.
Caatia	n A. Ormalianian
	n 4: Conclusion
	Our conclusion is presented using the Claims, Evidence, Reasoning format.
	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data).
	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question.
	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data).
□ □ □	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data). We explained how our evidence supports our claim. n 5: Recommendation We shared an actionable recommendation for coexisting with carnivores that can be completed
Gectio	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data). We explained how our evidence supports our claim. n 5: Recommendation We shared an actionable recommendation for coexisting with carnivores that can be completed by members of our community.
Gectio	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data). We explained how our evidence supports our claim. n 5: Recommendation We shared an actionable recommendation for coexisting with carnivores that can be completed
Section	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data). We explained how our evidence supports our claim. n 5: Recommendation We shared an actionable recommendation for coexisting with carnivores that can be completed by members of our community. Our recommendation is supported by the results of our investigation. n 6: Further Questions and Insights
Section	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data). We explained how our evidence supports our claim. n 5: Recommendation We shared an actionable recommendation for coexisting with carnivores that can be completed by members of our community. Our recommendation is supported by the results of our investigation. n 6: Further Questions and Insights We stated any changes that we would make to our investigation methods.
Section	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data). We explained how our evidence supports our claim. n 5: Recommendation We shared an actionable recommendation for coexisting with carnivores that can be completed by members of our community. Our recommendation is supported by the results of our investigation. n 6: Further Questions and Insights
Section Section Section	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data). We explained how our evidence supports our claim. n 5: Recommendation We shared an actionable recommendation for coexisting with carnivores that can be completed by members of our community. Our recommendation is supported by the results of our investigation. n 6: Further Questions and Insights We stated any changes that we would make to our investigation methods. We stated why would we make those changes to our investigation methods.
Section Section Section Section	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data). We explained how our evidence supports our claim. n 5: Recommendation We shared an actionable recommendation for coexisting with carnivores that can be completed by members of our community. Our recommendation is supported by the results of our investigation. n 6: Further Questions and Insights We stated any changes that we would make to our investigation methods. We stated why would we make those changes to our investigation methods. n 7: Presentation We shared presentation responsibilities evenly between group members.
Section Section Section Section Section	Our conclusion is presented using the Claims, Evidence, Reasoning format. Our claim addresses our investigative question. Our claim is supported by our evidence (investigation data). We explained how our evidence supports our claim. n 5: Recommendation We shared an actionable recommendation for coexisting with carnivores that can be completed by members of our community. Our recommendation is supported by the results of our investigation. n 6: Further Questions and Insights We stated any changes that we would make to our investigation methods. We stated why would we make those changes to our investigation methods.
